

FABS File Assistant Accelerator User Instructions

Overview

The **FABS (Financial Assistance Broker Submission)** file is a reporting format used by U.S. federal agencies and recipients to report financial assistance data, specifically grants, loans, cooperative agreements, and other types of financial assistance. It is part of the **DATA Act** (Digital Accountability and Transparency Act) reporting requirements, which aim to increase transparency and accountability in federal spending.

The FABS File Assistant provides a mechanism, assuming you are using the Public Sector Solutions Grantmaking module and have installed the [Grantmaking FIBF Data Model](#) accelerator, to determine how your data aligns with the **GSDM** (Governmentwide Spending Data Model) Validation Rules (as of 4/11/2024). The Validation Rules that are incorporated within this accelerator provide a combination of SOQL and Apex validations for the majority of the rules that were available at the time this accelerator was published. The SOQL rules are configurable via the Salesforce UI, so that these may be updated, as required, to meet any future requirements, as shown below:

The screenshot displays the Salesforce interface for the FABS File Assistant. The top navigation bar includes a search bar and several icons. Below the navigation bar, the breadcrumb trail shows 'FABS File Assistant' > 'FABS Interface File Rules'. The main content area is titled 'FABS Interface File Rule' and 'FABS1.1'. It features a 'Details' tab and a 'Related' tab. The 'Details' tab is active, showing a table with the following data:

Field	Value
FABS Interface File Rule Name	FABS1.1
Active	☒
Validation Type	SOQL
Severity	Fatal Error

Below the table, there is a section for 'Error Details' containing the SOQL Where Clause:

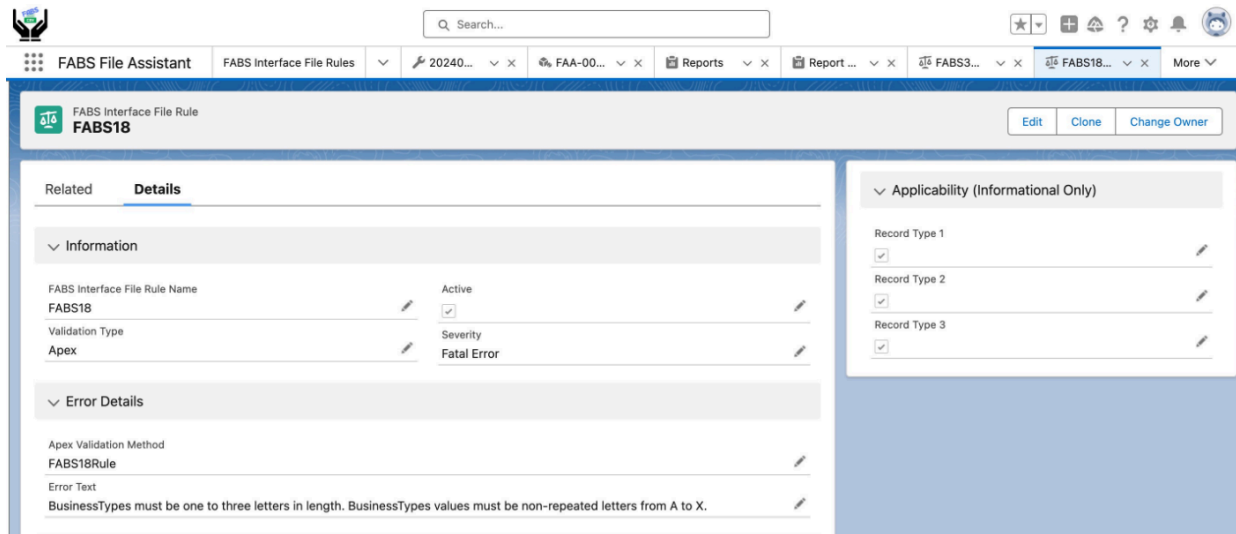

```
gr_record_type__c IN ('2', '3')
AND (gr_fain__c = NULL OR gr_fain__c = '')
AND (gr_correction_delete_indicatr__c = NULL OR gr_correction_delete_indicatr__c <> 'D')
```

The 'Error Text' field contains the message: 'FAIN is required for non-aggregate and PII-redacted non-aggregate records (RecordType = 2 or 3)'. On the right side of the interface, there is a section for 'Applicability (Informational Only)' with three record types:

- Record Type 1: ☐
- Record Type 2: ☒
- Record Type 3: ☒

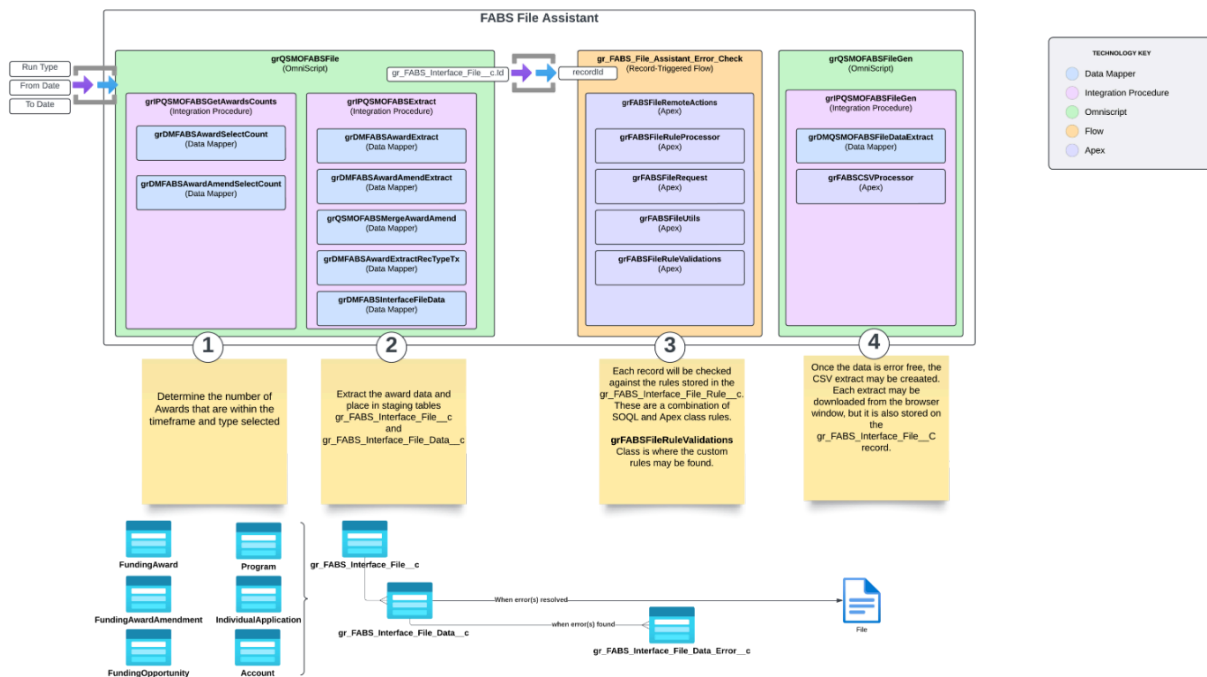

For rules that require more advance capabilities, Apex methods may be added/modified in the **grFABSFileRuleValidations** Apex class to accommodate those requirements.

FABS File Assistant Accelerator User Instructions

The data for the FABS Interface File Rules object is provided as part of this accelerator as a baseline for you to upload as a starting point.

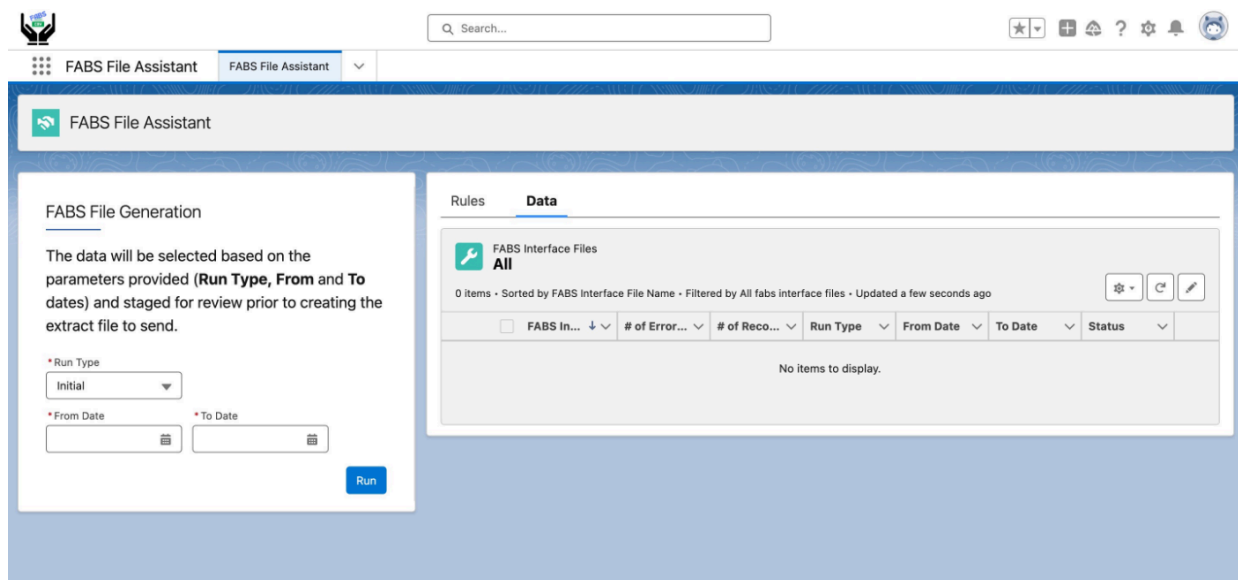

In addition, upon installation of the FABS File Assistant, you have the following components to assist you in creating the CSV (Comma-Separated Values) file required to upload to FABS. The diagram represents how these components work to gather the data, perform an initial error validation, and then generate the extract data in a CSV file.

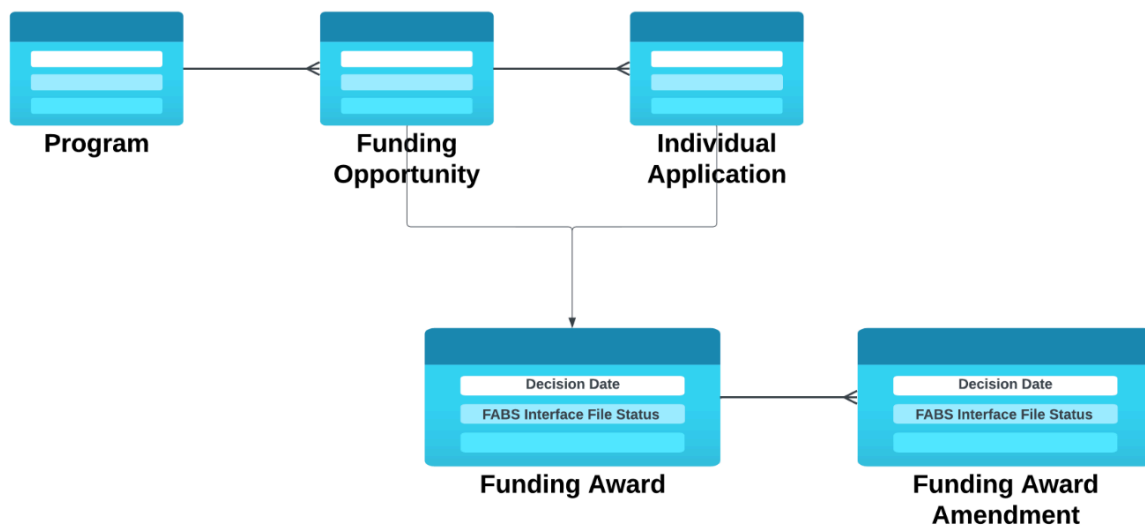

Instructions

Open the FABS File Assistant **tab** in the FABS File Assistant **app**.

The FABS File Generation (grQSMOFABSFile) OmniScript is used to pull the data based on the input parameters provided into a staging area (FABS Interface File and FABS Interface Data), as shown in the component on the left side of the page below:

The following is a notional data model showing what data is being extracted based on the input parameters provided:

The From Date and To Date parameters use the Decision Date on the Funding Award and Funding Award Amendment records to determine the data for extraction.

The FABS Interface File Status can represent 3 different types of records:

- Initial
- Correction
- Deletion

For each of these, the record may be **Pending** file generation or set to **Generated**. Only those records with a status that is **Pending** will be included for extraction. For example, records with a FABS Interface File Status of “Initial Pending” will be

FABS File Assistant Accelerator User Instructions

included in the Initial Run, once the record is included in a file, the FABS Interface File Status will be updated to “Initial Generated”.

RUNNING THE EXTRACT

Now that you have some background, let’s get started! Provide a the From Date, To Date, and Run Type and click **Run**. If there are records that meet your input parameters, you will receive an overview of the number of Awards and/or Amendments.

Data Extraction Detail

Date Range: 09-01-2024 to 10-01-2024

Run Type: Initial

Awards: 1

Award Amendments: 1

Click [Run](#) to extract this data for review prior to creating the extract file to send.

Change Inputs

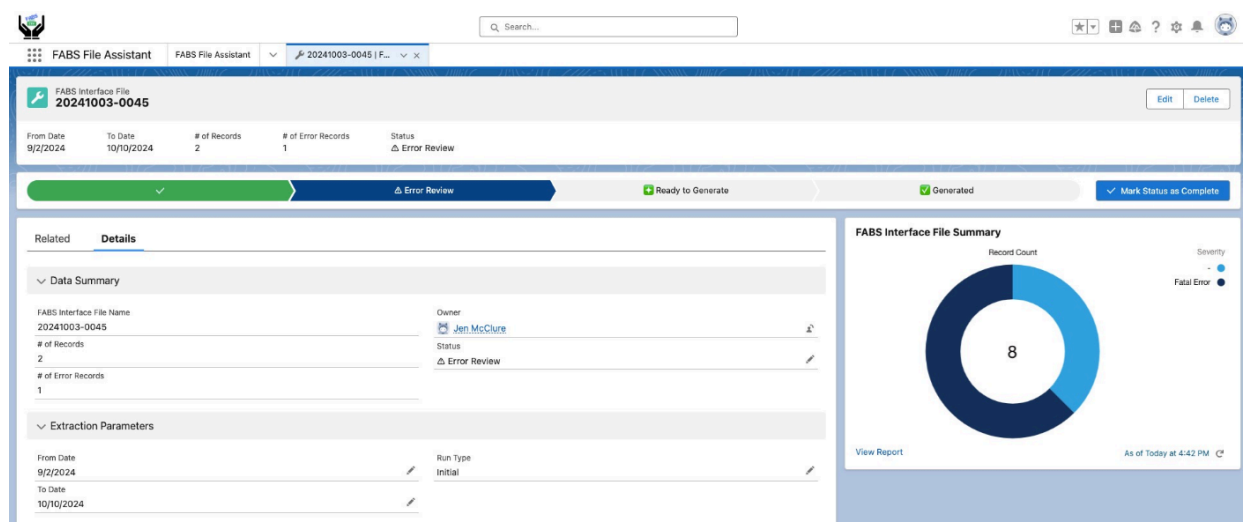

Stage Data

If you are satisfied with the data selected, then click **Stage Data**.

Once the data has been extracted, click **Go to Review Data**.

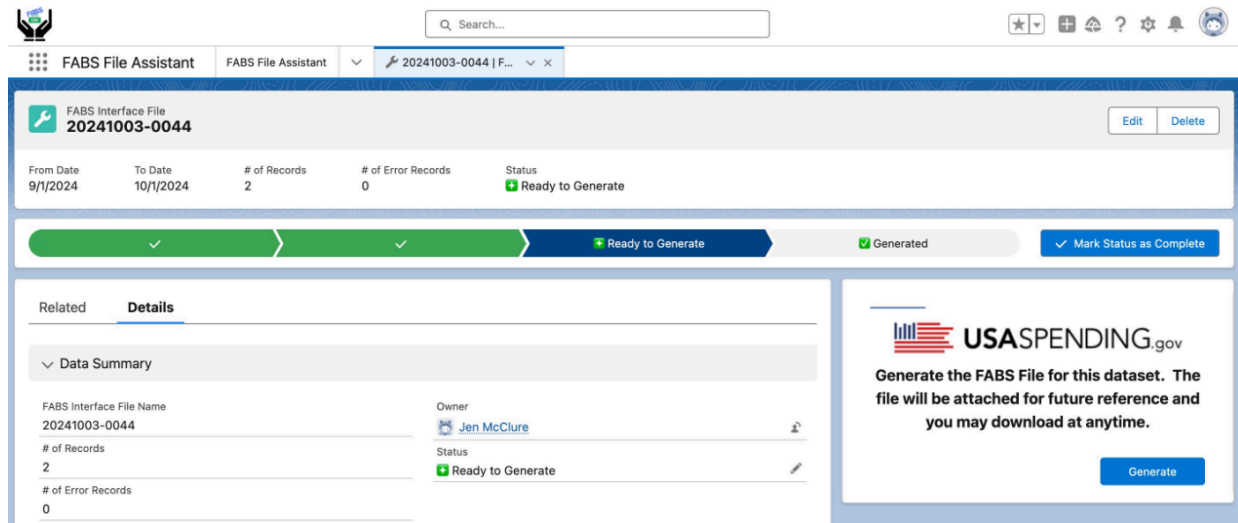

If the status is “Pending Error Check”, refresh the page until you receive a status of “Error Review” or “Ready to Generate”.

In the example below we have 1 record in Error. There are

"Ready to Generate" indicates there were no errors found when the FABS Interface File Rules were applied. At this point you are ready to generate the file. Look for the Omniscript component, click the **Generate** button.

FABS File Assistant Accelerator User Instructions

The screenshot shows the FABS File Assistant interface. At the top, there is a search bar and navigation tabs. The main header displays 'FABS Interface File 20241003-0044' with 'Edit' and 'Delete' buttons. Below this, a summary table shows the file's details:

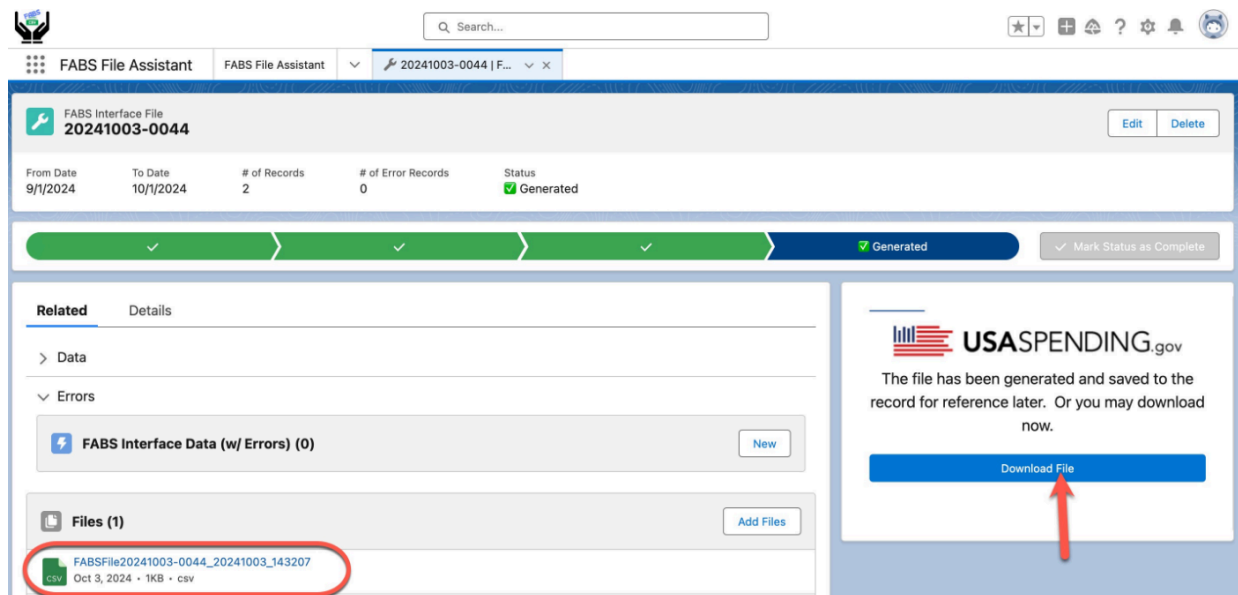

From Date	To Date	# of Records	# of Error Records	Status
9/1/2024	10/1/2024	2	0	Ready to Generate

Below the table, a progress bar shows the status 'Ready to Generate' with a green checkmark. To the right, a 'Mark Status as Complete' button is visible. The 'Details' tab is active, showing a 'Data Summary' section with the following information:

Field	Value	Owner	Status
FABS Interface File Name	20241003-0044	Jen McClure	Ready to Generate
# of Records	2		
# of Error Records	0		

On the right side, a USASPENDING.gov banner encourages generating the FABS file for the dataset, with a 'Generate' button.

At this point the file is attached as a Related File to the FABS Interface File record and you may click Download to immediately download.

The screenshot shows the FABS File Assistant interface after the file has been generated. The status is now 'Generated'. The progress bar shows 'Generated' with a green checkmark. The 'Details' tab is active, showing a 'Data' section with a 'New' button and an 'Errors' section with a 'New' button. Below these, a 'Files (1)' section is highlighted with a red circle, showing a file named 'FABSFile20241003-0044_20241003_143207.csv' with a download icon. On the right side, a USASPENDING.gov banner states that the file has been generated and saved to the record for reference later, with a 'Download File' button highlighted by a red arrow.
